富山県の教育

Education in Toyama Prefecture

In order to cope with the age of rapid change that is difficult to predict, abilities and qualities to develop a solution by spotting the problems, thinking proactively and discussing collaboratively are sought after.

Development of "Project Based Learning"

Promotion of "ICT Education"

Three Cross-sectional Initiatives

Realization of "Team Toyama Education"

Future Vision through Education

Improved wellbeing

Realization of a society that is sustainable, diverse and inclusive, where everyone can live one's own lively life

Develop talents and personalities

Toyama Science Olympics

Since 2010 high school students have tackled challenges concerning social phenomena and have tried various experiments, for the purpose of developing their scientific view-point and the way of thinking to find solutions to various problems they might face in society. In 2022 Toyama team achieved a feat of winning the championship in the Science Olympiad Junior National Tournament.

Science Olympiad Junior National Tournament 2022

Project Based Learning

Millennials and natives to tackle a question which has no right answer in collaboration with various people, to search after. Toyama Prefecture promotes "Project Based Learning" to activate the power of spotting the problems and finding solutions for themselves, and develop 21st-century education in collaboration with companies and universities to apply what they learn in school to problem solving.

Education in Toyama Prefecture

Nurture practical social skills

The 14-Year-Old Challenge

This is a chance for eighth graders to have a five-day work experience in which they are expected to develop consciousness about rules such as greeting and punctuality, and equality to interact with other people with responsibility, and are expected to reflect on their own life. They hopefully come to realize the importance of cooperating with others and the importance of consideration and responsibility toward others after being required to solve various issues outside school work. It is a precious opportunity to think for personal development.

Promote learning through ICT

Due to the spread of COVID-19, the method of learning has been diversified. For example, online classes and sharing opinions on the cloud prevail, as ever students' own terminal model of education has rapidly progressed. Toyama Prefecture has been nurturing students' power of thinking, judgment and

empowerment through ICT, as it has been promoting personalized learning by providing activity and task based to each student, and collaborative learning that is to combine various ways of thinking to make a better idea. The same policy is applied to special needs schools.

Foster human resources capable of contributing to the development of society

Deepen understanding of local nature, history, culture, industry, ancestors' wisdom and their great achievements, and local culture by utilizing the digital material that Toyama Prefecture made. Nurture willingness to contribute to society in broader perspective through learning about our ancestors' way of life and the way of thinking who played an active part domestically and/or internationally.

Nurture human resources who can play an active part in international society

Aim at nurturing human resources who can think a goal for their own future for a broad, international perspective, along with culture, diversity and global mind and who can play a pivotal role in Toyama, in Japan and in international society. Also aim at developing abilities to seek out to solve problems, to communicate effectively and to speak English fluently as well as at promoting international exchange activities.
